

Teacher Journey

Feature Specification & User Stories

Ethical Yoga App

Internal Document • March 2026

Draft for Review

Overview

This document maps the complete teacher journey from discovery to ongoing use. Each phase includes the user stories that drive the feature requirements, acceptance criteria for implementation, and open questions that still need resolution.

The teacher is the primary user of the platform. They bring their own students, manage their own classes, and control their own business. The platform is a toolkit that makes independent teaching viable — not a marketplace, not a studio replacement.

The journey follows eight phases:

- 1. Sign Up & Profile** — Creating an account and setting up a teaching profile
- 2. Room Setup** — Adding and configuring teaching spaces
- 3. Create a Class** — Scheduling classes with pricing and policy settings
- 4. Share & Invite** — Getting students into the system
- 5. Registration & Auto-Cancel** — The period between class creation and class day
- 6. Class Day** — Attendance tracking and the class itself
- 7. Post-Class Billing** — Price calculation, charging, and payouts
- 8. Ongoing Teaching** — CRM, communication, recurring classes, and studio tracking

1

Sign Up & Profile

The teacher discovers the platform (likely through word of mouth — fits the community-driven philosophy) and creates an account. There is no verification process. The platform is open to anyone who wants to teach, regardless of certification, training background, or affiliation. We don't define what a "real" yoga teacher is.

User Stories

As a **new teacher**, I want to **create an account with minimal friction**, so that **I can start setting up my teaching practice quickly**.

- ✓ Teacher can sign up with email and password (or social login)
- ✓ No certification or credential verification required

- ✓ Account creation takes less than 2 minutes

As a **teacher**, I want to **set up a simple profile with my name, profile picture, and a short description of what I teach**, so that **students who visit my page know who I am**.

- ✓ Profile includes: name, profile picture (optional), short bio/description
- ✓ Profile is minimal — not a portfolio or brand builder
- ✓ Profile is visible on the teacher's personal page
- ✓ Profile can be edited at any time

The profile is intentionally minimal. This is an addition to a teacher's existing online presence, not a replacement for it. Teachers already have Instagram, a website, or word-of-mouth reputation. The profile exists so students recognise who they're booking with, nothing more.

Open Questions

- ? Should the bio have a character limit to enforce brevity?
- ? Do we need any onboarding flow (guided setup) or is the interface self-explanatory enough?

2

Room Setup

Before creating a class, the teacher needs a teaching space. The platform maintains a shared database of rooms, identified by address. Teachers can add new rooms (public or private) and set their own overrides for capacity and rental rate.

Room Structure

Rooms are identified by a three-level hierarchy to prevent duplicates and enable sharing:

Address — the physical location (street, city, postcode)

Floor — the level within the building (ground, 1st, 2nd, etc.)

Room — the specific space (room number or name)

When a teacher enters an address, the system checks for existing matches. If the address exists, the teacher can browse existing rooms or add a new one. This prevents duplicate entries while allowing multiple rooms per building.

User Stories

As a **teacher**, I want to **add a new room to the system with its address, floor, and room identifier**, so that **I have a space to assign my classes to**.

- ✓ Address lookup checks for existing locations to prevent duplicates
- ✓ Teacher specifies floor and room number/name
- ✓ Room can be marked as public (visible to all teachers) or private (only visible to the teacher who created it)
- ✓ Room base properties include: absolute maximum capacity, available equipment (mats, blocks, straps, bolsters, blankets), and general notes

As a **teacher**, I want to **set my own capacity and rental rate for a room**, so that **the pricing calculation reflects my actual situation**.

- ✓ Teacher can set a personal maximum capacity that is lower than or equal to the room's absolute maximum
- ✓ Teacher sets their own rental rate for this room (different teachers may pay different rates for the same space)
- ✓ Teacher can add notes about what equipment they bring vs. what's available at the venue
- ✓ Overrides are per-teacher and don't affect other teachers using the same room

As a **teacher**, I want to **find and select a room that another teacher has already added**, so that **I don't need to re-enter information for a space that's already in the system**.

- ✓ Teacher can search by address to find existing public rooms
- ✓ When selecting an existing room, teacher still sets their own capacity override and rental rate
- ✓ Original room properties (address, max capacity, equipment) are inherited

Open Questions

- ? *Can room base properties (equipment, max capacity) be updated by any teacher who uses it, or only the original creator?*
- ? *Should there be a way to merge duplicate rooms if they slip through?*
- ? *Do we need a map view or is address search sufficient?*

3

Create a Class

The teacher creates a class by selecting a room, setting the schedule, and configuring their pricing and policy settings. Classes can be one-off or recurring. The system needs enough information to power the pricing engine: room cost, teacher's desired rate, and student capacity range.

User Stories

As a **teacher**, I want to **create a class with a specific room, date, time, and duration**, so that **students can find and register for my class**.

- ✓ Teacher selects a room from their configured rooms
- ✓ Teacher sets date, start time, and duration
- ✓ Teacher sets a description or class type (e.g., vinyasa, yin, hatha)
- ✓ Class appears on the teacher's personal page after creation

As a **teacher**, I want to **set my desired rate and student capacity for a class**, so that **the pricing engine can calculate fair prices**.

- ✓ Teacher enters their desired earning rate for this class
- ✓ Teacher sets minimum number of students (below which the class auto-cancels)
- ✓ Teacher sets maximum number of students (at which point a waitlist activates)
- ✓ Room rental cost is pre-filled from the room configuration but can be adjusted per class

As a **teacher**, I want to **configure cancellation and auto-cancel policies for my class**, so that **students know the rules and the system handles cancellations automatically**.

- ✓ Teacher selects a student cancellation deadline from a dropdown
- ✓ Teacher selects an auto-cancel check time from a dropdown
- ✓ Auto-cancel time must be shorter than the cancellation deadline
- ✓ Both settings have sensible defaults

Settings

Student cancellation deadline: 48h, 24h, 12h, 6h (*default: 24h*)

Auto-cancel check: 4h, 2h, 1h (default: 2h)

The auto-cancel check is the moment the system verifies that the minimum number of students is registered. If the threshold is not met, the class is automatically cancelled and all registered students are notified. No teacher action is required.

The student cancellation deadline is the cutoff for penalty-free cancellation. Students who cancel after this deadline or who don't show up are still included in the price calculation and charged accordingly.

As a **teacher**, I want to **set up a recurring class that automatically generates individual class instances**, so that **I don't need to manually create the same class every week**.

- ✓ Teacher can set a class to recur weekly on the same day and time
- ✓ Each instance is a separate class with its own registrations, attendance, and pricing
- ✓ Teacher can cancel or modify individual instances without affecting the series
- ✓ Teacher can end the recurring series at any time

Open Questions

- ? Should recurring classes have end dates, or run indefinitely until the teacher stops them?
- ? Can a teacher set different desired rates for different classes, or is it tied to their profile?
- ? How far in advance are recurring class instances generated? (e.g., 4 weeks ahead, 8 weeks?)

4

Share & Invite

The teacher's classes live on a personal page. This page is the primary entry point for students. The teacher shares the link through their existing channels — Instagram bio, WhatsApp groups, email, word of mouth. Students who visit the page see the teacher's profile, upcoming schedule, and can register directly.

User Stories

As a **teacher**, I want to **have a personal page with my profile and class schedule**, so that **I have a single link to share with students**.

- ✓ Personal page URL follows a clean format (e.g., app.com/teachername)
- ✓ Page shows the teacher's name, profile picture, and short description

- ✓ Page lists all upcoming classes with date, time, location, and available spots
- ✓ Students can register for a class directly from this page

As a **teacher**, I want to **connect a custom domain to my personal page**, so that **it feels like my own platform and fits my existing online presence**.

- ✓ Teacher can link a custom domain (e.g., yoga.janedoe.nl) to their personal page
- ✓ Setup process is straightforward with clear DNS instructions
- ✓ Custom domain shows the same content as the default URL

As a **teacher**, I want to **share a direct link to a specific class**, so that **I can promote individual classes on social media or in messages**.

- ✓ Each class has its own shareable URL
- ✓ The link shows class details and allows direct registration
- ✓ If the student doesn't have an account, account creation is part of the booking flow

Account Creation During Booking

When a new student clicks a class link or visits a teacher's page for the first time, they can register for a class immediately. Account creation happens as part of the booking process, not as a separate step. The student provides:

First name and last name — only first name + last initial is shown to the teacher

Email address — for account login and system notifications

Payment method — required for post-class billing

Income tier — self-reported, framed with yogic philosophy quotes

Once the account exists, the student can book with any teacher on the platform without creating another account. One account, multiple teachers.

Open Questions

- ? *Should there be an invite-by-email feature where the teacher sends a personal invitation?*
- ? *Can the teacher see how students found their page (direct link, shared class link)?*

After a class is created and shared, students register. This is the period between class creation and class day. The system manages the registration state, enforces capacity limits, handles the waitlist, and automatically cancels classes that don't meet the minimum.

User Stories

As a **teacher**, I want to **see how many students have registered for my upcoming classes**, so that **I know whether my classes are filling up**.

- ✓ Teacher dashboard shows registration count vs. minimum and maximum for each class
- ✓ Teacher can see the aggregate income tier distribution of registered students
- ✓ Teacher receives a notification when a class reaches its minimum threshold
- ✓ Teacher receives a notification when a class reaches maximum capacity

As a **teacher**, I want to **have the system automatically cancel my class if the minimum isn't met**, so that **I don't need to manually check and cancel**.

- ✓ At the auto-cancel check time, the system checks registrations against the minimum
- ✓ If minimum is not met, the class is cancelled automatically
- ✓ All registered students are notified of the cancellation
- ✓ No charges are applied to any student for an auto-cancelled class
- ✓ The teacher is notified that the class was cancelled due to insufficient registrations

As a **teacher**, I want to **have a waitlist when my class is full**, so that **students can still express interest and fill spots from cancellations**.

- ✓ When a class reaches maximum capacity, new students are added to a waitlist
- ✓ If a registered student cancels before the cancellation deadline, the first waitlisted student is automatically moved in
- ✓ Waitlisted students who are moved in after the cancellation deadline are locked in (no cancellation option)
- ✓ Waitlisted students are notified when they are moved into a class
- ✓ Waitlisted students can remove themselves from the waitlist at any time before being moved in

Registration Timeline

A typical class timeline from the teacher's perspective:

Class created — appears on teacher's page, registration opens

Students register — teacher monitors registration count and tier distribution

Cancellation deadline passes — registered students are locked in (cancellations after this point are charged)

Auto-cancel check — system confirms or cancels the class based on minimum attendance

Registration stays open — students can still register until class starts (but cannot cancel penalty-free)

Class starts — registration closes

6

Class Day

On class day, the teacher's primary job is to teach. The system stays out of the way. Attendance tracking is a lightweight CRM function — it records who was actually present, but doesn't affect pricing. Pricing is based on registrations, not attendance.

User Stories

As a **teacher**, I want to **see a list of registered students for today's class**, so that **I know who to expect**.

- ✓ Teacher sees a class-day view with all registered students (first name + last initial)
- ✓ View shows total number of students and the resulting price estimate
- ✓ View is accessible on mobile (teachers are often at the venue, not at a desk)

As a **teacher**, I want to **mark attendance for students who showed up**, so that **I have accurate attendance records and can follow up with no-shows**.

- ✓ Teacher can check off students who are present
- ✓ Attendance status is recorded: present, no-show, or late cancellation
- ✓ No-shows receive a friendly notification ("We missed you today")
- ✓ Attendance data feeds into the CRM for historical tracking
- ✓ Marking attendance does not change the price calculation

Open Questions

- ? Should there be a student self-check-in option (e.g., QR code at the venue)?
- ? Should the teacher be able to add walk-in students who weren't registered? If so, how does this affect pricing?

7

Post-Class Billing

After class, the system calculates each student's price based on the registered group and their income tiers. Students are charged and the teacher receives their payout. The pricing engine is the core of the platform — this is where the philosophy becomes tangible.

Pricing Calculation

The calculation is based on everyone who was registered at class time (minus valid early cancellations). Late cancellations and no-shows are included and charged.

Total needed = room rental cost + teacher's desired rate

Average price per student = total needed ÷ number of registered students

Individual price = average price × income tier ratio

The tier ratios are dynamically adjusted so that the sum of all individual prices equals the total needed. A price cap limits the maximum any student can be charged. If the cap prevents the total from being met, the teacher earns less than their desired rate.

User Stories

As a **teacher**, I want to **see a clear breakdown of how the class price was calculated**, so that **I understand what I'm earning and why**.

- ✓ Post-class summary shows: total needed, number of students, tier distribution, and resulting price per tier
- ✓ Teacher sees their net payout (total collected minus room cost)
- ✓ If the price cap reduced the teacher's earning, this is clearly shown
- ✓ Summary is available per class and in aggregate views (weekly, monthly)

As a **teacher**, I want to **receive my payout after each class without manual action**, so

that **I get paid reliably and automatically.**

- ✓ Students are charged automatically after class
- ✓ Teacher receives payout after room cost is deducted
- ✓ Failed student payments are flagged and the teacher is notified
- ✓ Teacher can view payment history and pending payouts

Open Questions

- ? *What payment processor? (Stripe, Mollie for NL market, or both?)*
- ? *Payout frequency: per class, weekly, or monthly? Teacher's choice?*
- ? *How to handle failed student payments? Retry policy? Consequences for repeated failures?*
- ? *When exactly is the price calculated — at the cancellation deadline, at auto-cancel time, or after class? (Billing always happens after class regardless)*

8

Ongoing Teaching

Once a teacher is up and running, the platform supports their ongoing practice through CRM tools, communication features, recurring class management, and optional studio class tracking.

CRM & Attendance

As a **teacher**, I want to **view attendance history for each student**, so that **I can see who my regular students are and who has dropped off.**

- ✓ Per-student view shows: classes attended, no-shows, cancellations, and total classes
- ✓ Teacher can see when a student last attended
- ✓ Aggregate view shows overall attendance trends

As a **teacher**, I want to **see a consolidated student list across all my classes**, so that **I have a single view of my entire teaching community.**

- ✓ Student list shows all students who have ever registered with the teacher
- ✓ List includes attendance frequency and last attendance date
- ✓ Students from studio classes (if tracked) appear in the same list

Communication

As a **teacher**, I want to **send announcements to students about schedule changes or cancellations**, so that **my students stay informed**.

- ✓ Teacher can send messages to all students registered for a specific class
- ✓ Teacher can send messages to all their students
- ✓ Messages respect student communication preferences (students can opt out)
- ✓ Teacher cannot contact students who have opted out

Privacy & Student Preferences

Students control what information their teachers can see. The default is maximum privacy — only first name and last initial. Students can override these defaults on a per-teacher basis.

Always visible: first name + last initial

Optional (per-teacher override): email, phone, health notes, experience level

Never visible to teacher: payment details, individual income tier

Aggregate visibility: teacher sees class-level tier distribution (e.g., “3 in tier 1, 5 in tier 3”)

Studio Class Tracking

As a **teacher**, I want to **add my studio classes to the system for attendance tracking**, so that **I have a complete view of my student community across all teaching environments**.

- ✓ Teacher can create classes marked as “studio class” (no pricing engine)
- ✓ Studio classes support attendance tracking and student management
- ✓ Students from studio classes appear in the teacher’s consolidated CRM
- ✓ No billing or pricing is applied to studio classes

Studio class tracking creates a natural pathway: a student who attends a teacher’s studio class and sees they also teach independent classes may choose to attend those as well. The teacher’s personal page shows both types of classes, making it easy for students to explore.

Open Questions

- ? Should communication support email, in-app notifications, or both?
- ? Is there a need for group messaging (class-level chat) or is one-to-many sufficient?
- ? Should the teacher be able to export their student list (e.g., for use outside the platform)?
- ? How does a student register for a studio class? Does the teacher add them manually?
